

# Chapter 2 Network Models

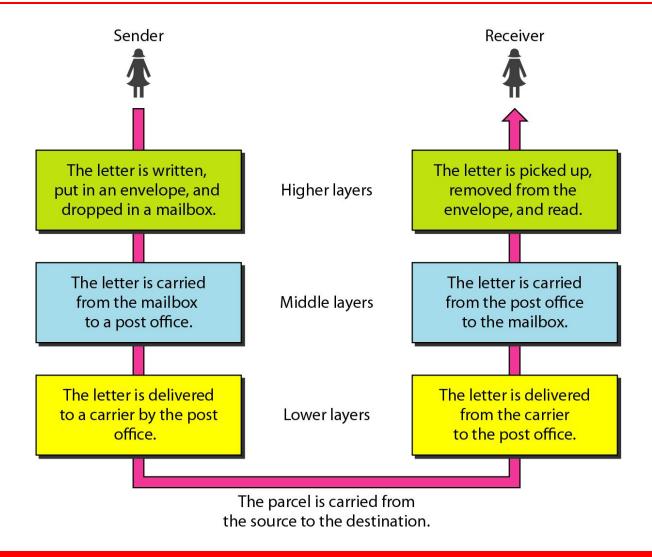

#### 2-1 LAYERED TASKS

We use the concept of layers in our daily life. As an example, let us consider two friends who communicate through postal mail. The process of sending a letter to a friend would be complex if there were no services available from the post office.

Topics discussed in this section:

Sender, Receiver, and Carrier Hierarchy

#### Figure 2.1 Tasks involved in sending a letter

#### 2-2 THE OSI MODEL

Established in 1947, the International Standards Organization (ISO) is a multinational body dedicated to worldwide agreement on international standards. An ISO standard that covers all aspects of network communications is the Open Systems Interconnection (OSI) model. It was first introduced in the late 1970s.

#### Topics discussed in this section:

Layered Architecture
Peer-to-Peer Processes
Encapsulation

## ISO is the organization. OSI is the model.

#### Figure 2.2 Seven layers of the OSI model

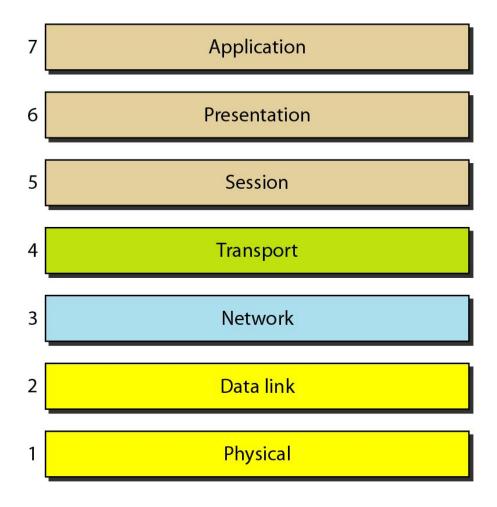

Figure 2.3 The interaction between layers in the OSI model

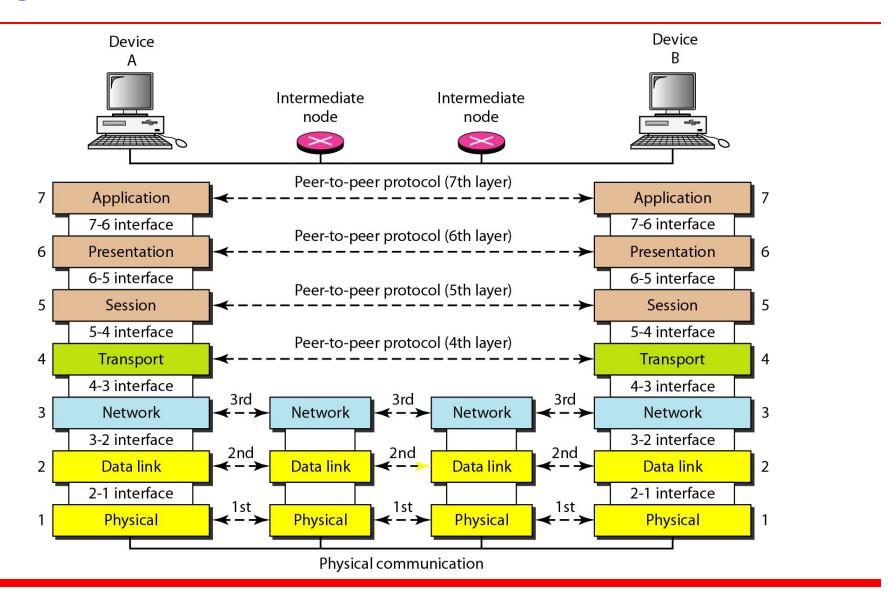

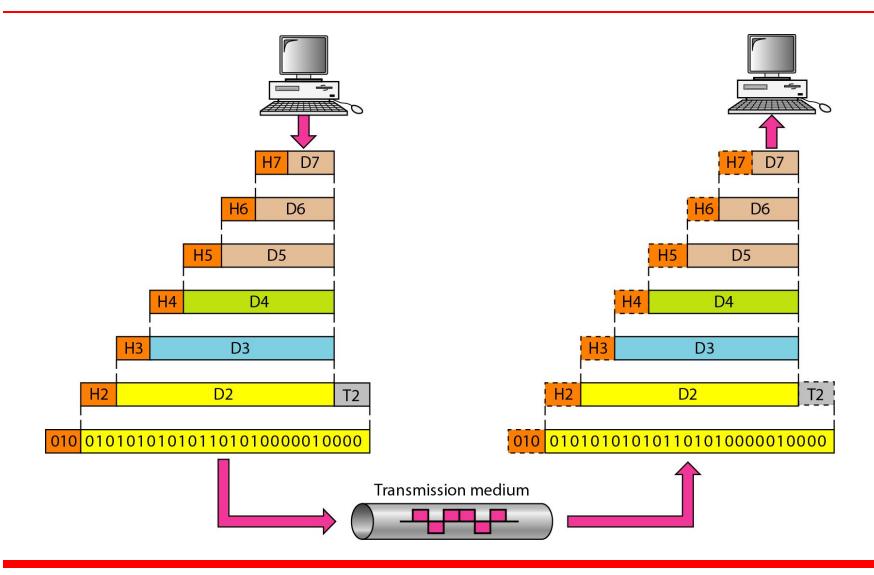

Figure 2.4 An exchange using the OSI model

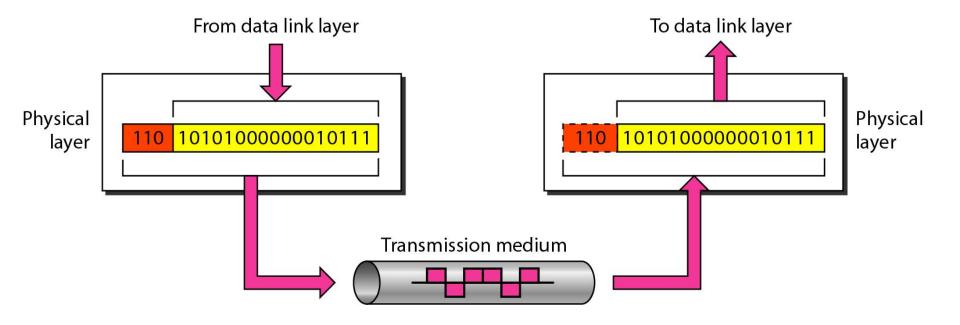

#### 2-3 LAYERS IN THE OSI MODEL

In this section we briefly describe the functions of each layer in the OSI model.

#### Topics discussed in this section:

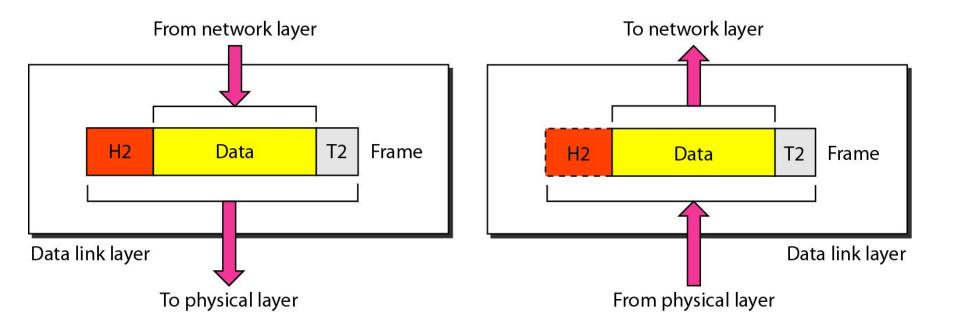

Physical Layer
Data Link Layer
Network Layer
Transport Layer
Session Layer
Presentation Layer
Application Layer

#### Figure 2.5 Physical layer

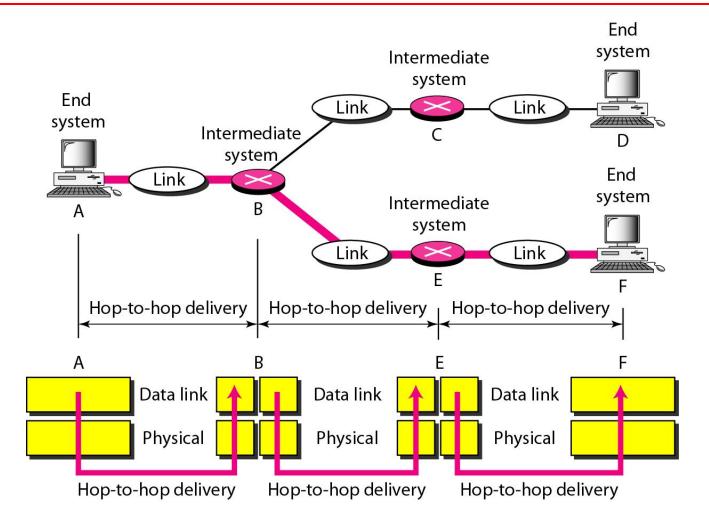

The physical layer is responsible for movements of individual bits from one hop (node) to the next.

#### Figure 2.6 Data link layer

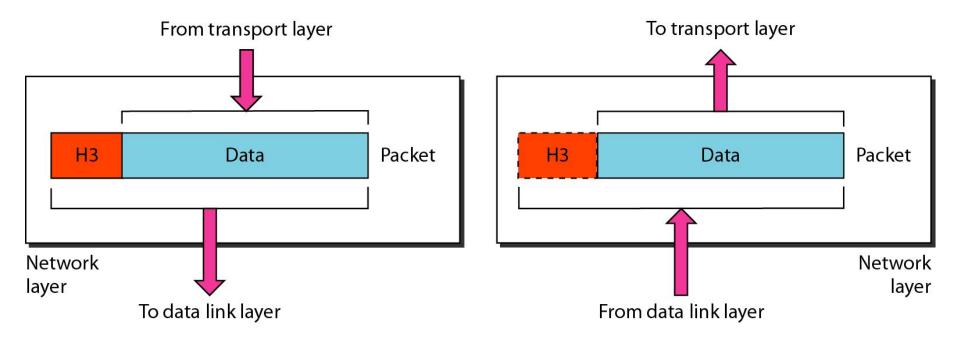

The data link layer is responsible for moving frames from one hop (node) to the next.

#### Figure 2.7 Hop-to-hop delivery

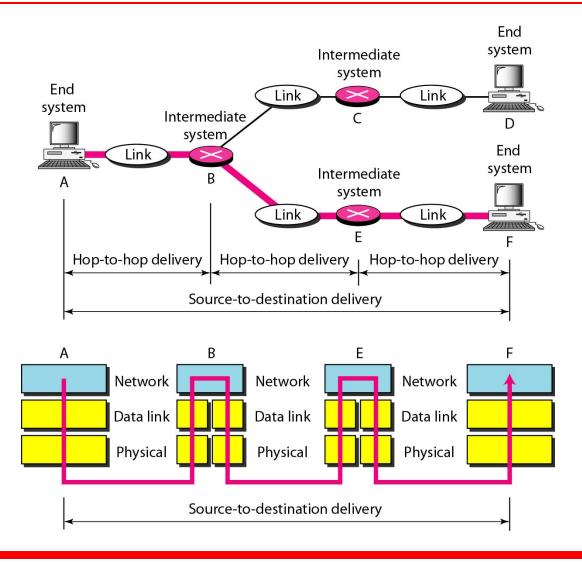

#### Figure 2.8 Network layer

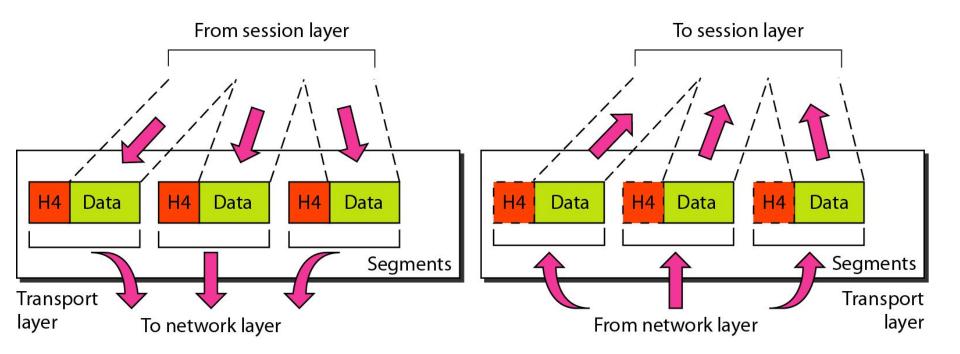

The network layer is responsible for the delivery of individual packets from the source host to the destination host.

#### Figure 2.9 Source-to-destination delivery

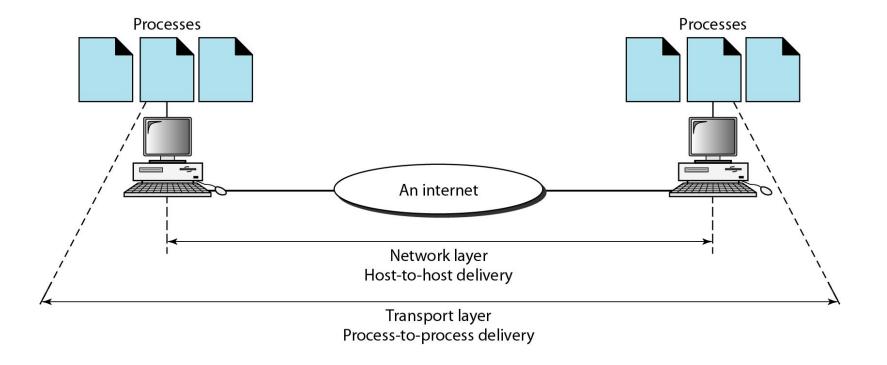

#### Figure 2.10 Transport layer

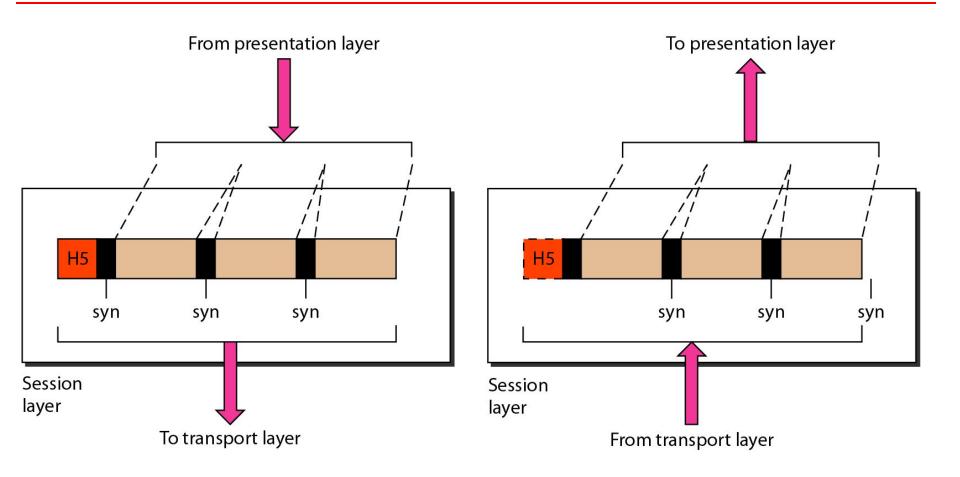

The transport layer is responsible for the delivery of a message from one process to another.

#### Figure 2.11 Reliable process-to-process delivery of a message

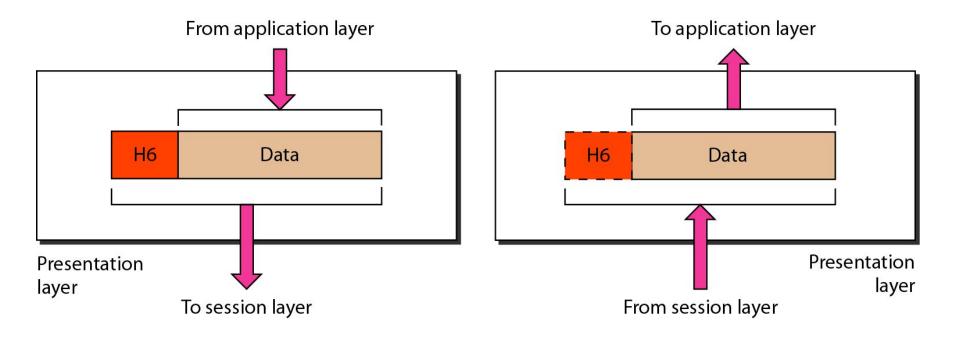

#### Figure 2.12 Session layer

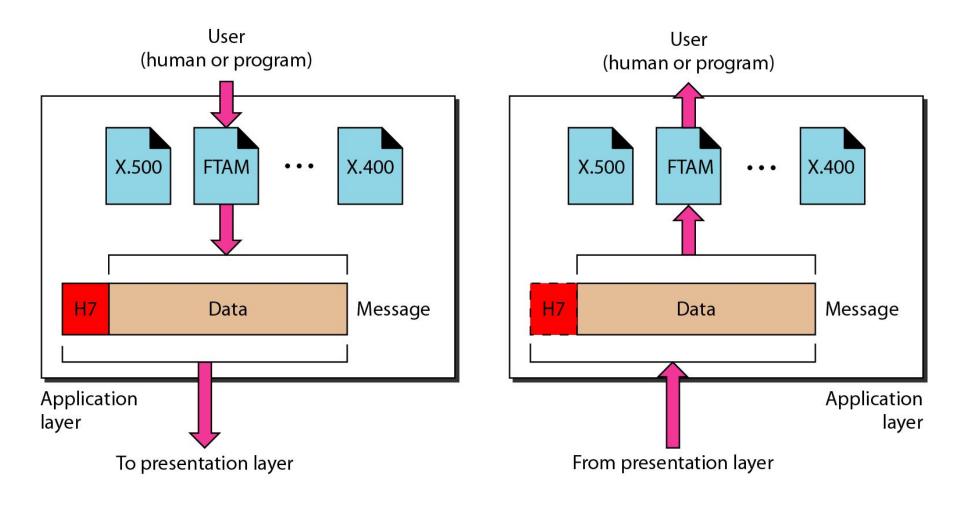

The session layer is responsible for dialog control and synchronization.

#### Figure 2.13 Presentation layer

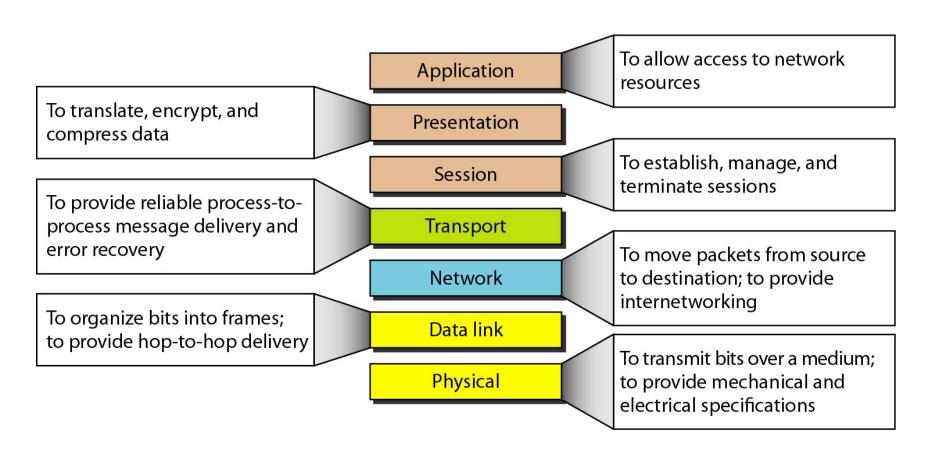

The presentation layer is responsible for translation, compression, and encryption.

#### Figure 2.14 Application layer

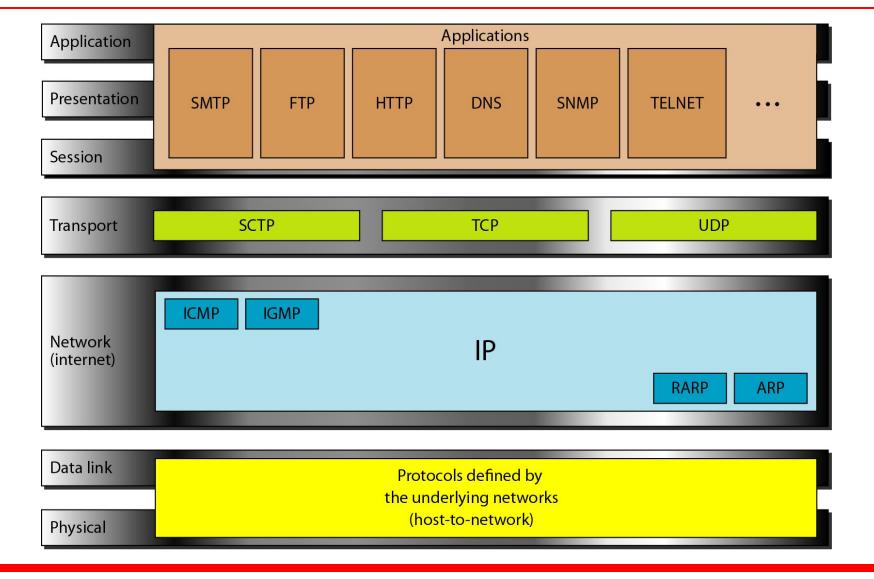

The application layer is responsible for providing services to the user.

#### Figure 2.15 Summary of layers

#### Figure 2.16 TCP/IP and OSI model

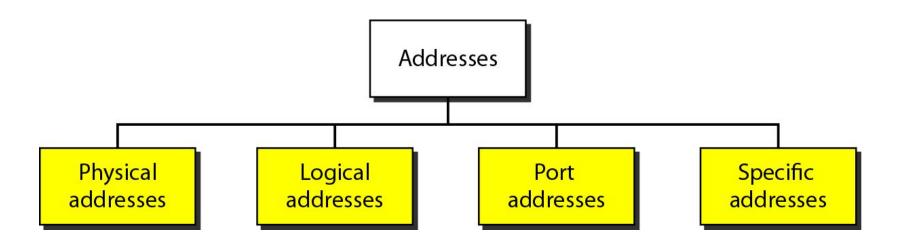

#### 2-5 ADDRESSING

Four levels of addresses are used in an internet employing the TCP/IP protocols: physical, logical, port, and specific.

#### Topics discussed in this section:

Physical Addresses
Logical Addresses
Port Addresses
Specific Addresses

#### Figure 2.17 Addresses in TCP/IP

#### Figure 2.18 Relationship of layers and addresses in TCP/IP
